

Inventing The Future By Akyla W.

“Inventing The Future” By Marfe Delano demonstrates 3 reasons why Thomas Edison is one of America's greatest inventors because He invented many useful products, he was Generous and, he never gave up after no one wanted to buy his first product. Thomas Edison had a family and wife but inventing was his true love. Edison spent days in his lab making new inventions and would never come home.

Edison created many useful items we still use in the 21 century.” First they carbonized it by baking it until it charred and turned into carbon. Then they inserted the carbonized thread into a glass bulb, forced out the air with a special vacuum pump, and sealed the glass.” This citation talks about one of the many inventions that Edison made that is very useful to us today, the light bulb. The light bulb is useful to use because we would have to use candles which cause fires, construction work would take a lot longer if done at night, and reading books would be harder at night.

Thomas Edison was very kind toward his workers and they always described him as generous.” Moreover, Edison could be generous. He often gave assistants who worked closely with him on an invention a percentage of profits it made.” Edison was generous because he shared his earnings with his workers that worked closely with him. He was also generous because he treated his workers like his friends not like his employees.

Thomas Edison was dedicated to make something that everyone wanted to buy and sell and that dedication made him a great inventor."Edison hoped the device would be used by the state legislatures, but lawmakers were not interested in buying it. The experience taught him a valuable lesson: Never again would he invent something that people didn't want to buy." This citation shows that Edison never backed down because he made a bold vow to never create something that no one wanted to buy but how did he know what people wanted? This also shows how he was such a great inventor because he knew what everyone needed to make things easier.

"Inventing The Future" by Marfe Delano demonstrates 3 reasons why Thomas Edison is known as one of America's greatest inventors because he invented many useful products, he was generous, and he didn't give up when know one wanted to buy his first product. Edison may have had a family but inventing always came first. Thomas Edison made many things that came of use to us even to this day. When Edison's first invention was an electronic voting machine lawmakers weren't interested in buying the contraption but he didn't stop at that he kept making things and he vowed to himself that he would never make anything that know one was interested in buying but he didn't stop at that he kept going. That's why he is known as one of America's greatest inventors.
